**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gilmer et al. 2002/01933494, in view of Nakahashi et al. 4,788,244, Sakai et al. 5,115,010, Martens et al. 5,618,865, Kasowski et al. 6,025,419, Cosstick et al. 6,166,114, Oka et al. 6,258,927 or Martens et al. 6,350,802.
3. The rejection is maintained in view of the "Response to Arguments" below.

***Response to Arguments***

4. Applicant's arguments filed 5/8/08 have been fully considered but they are not persuasive. In Examples 17-20 of the primary reference not all the oligomeric polyamide/clay mixture is blended with the polyamide polymer. For example, in Example 17, 100 grams of the polyamide/clay blend is mixed with 300 grams of polyamide polymer. Since the blend is approximately 85% polyamide oligomer, the final mixture contains about 22% polyamide oligomer, relative to the total weight of the polyamide. As far as the melting point difference is concerned since the structures of the polymeric polyamide and the oligomeric polyamide are the same (MXD6) the melting point of the lower molecular weight polyamide has to be lower than the higher molecular weight polyamide. The molecular weight ranges of the two polyamides are disclosed in claims 20 and 29 respectively. Gilmer et al. teach that flame-retardants may be added if desired. The secondary references show the flame-retardants which

are customarily used and found effective with polyamides. Thus there is sufficient motivation for the addition of the flame-retardants shown by the secondary references to the composition of the primary reference. The rejection stands.

5. All other rejections are withdrawn by the examiner in light of applicants' response.
